

EAGLE MMIS

Enhanced Automated Graphical Logistics Environment
Maintenance Management Information System

Keeping product support simple.

EAGLE MMIS keeps product support simple as an online maintenance management system that ensures maximum product reliability and availability. MMIS provides supply-chain management, failure tracking, configuration management and work flow tracking in real time.

Why choose EAGLE MMIS?

For over two decades, the EAGLE MMIS program has been developing world-class software solutions designed to support the production and management of program logistics, documentation and product support data. The software, developed by Raytheon Intelligence & Space, is used by top major aerospace and defense contractors in more than 40 countries worldwide.

EAGLE MMIS saves time by using logistics support analysis data developed during the product development phase as its equipment baseline and by facilitating the management of the fielded product through its operational life. The system has the capability to fuse data generated by repair facilities, forward depots, customers, subcontractors and field representatives into a globally accessible common data repository that connects and informs program stakeholders.

EAGLE MMIS' total asset visibility such as location, configuration, serviceability

status and history are continuously available. This includes mobile devices in the field, which maximize efficiency. Its user-configurable dashboards and reports also constantly provide updated and real-time key data in graphical representations, including integrated automatic email notifications that help stakeholders make data driven-decisions.

Operable on internal networks or the internet, MMIS provides full user control with roles, end item and project access limits as well as system restrictions with the menu. All MMIS data is provided in real time, and the system integrates with Oracle, IMOPS, OMIS, U.S. Navy CAV EDI System, PTC Windchill PDM BOM loader and other APIs.

Raytheon Intelligence & Space is a leader in providing intelligence, surveillance and reconnaissance; advanced cyber solutions; weather and environmental solutions; information-based solutions, training, logistics, engineering, product support and operational support services.

KEY CAPABILITIES

- A complete FRACAS system
- Actions and events
- AdHoc and standard reports
- Configuration management (AsBuilt's)
- Document tracking and linking
- Engineering changes
- Inventory management
- Part number management
- Performance metrics are automatically generated in real time
- Preventative maintenance
- Purchase and repair order contracts
- Warehouse management
- Work orders
